

Xenoterric Art Symbology and Empowered Visual Networks

Particularly in the context of the Xenoglyphic Extraverse known as Elsewhere

Abstract:

Heisenberg's Uncertainty Principle allows for an undetermined amount of energy to be embedded in an object in a quantum but unobserved state. The observation of this energy and its resulting quantification is the dispersement of that energy. Similarly extraverses--that is, alternate realities, such as the one known colloquially as "Elsewhere"--exist in a quantum state alongside the known Universe; our inability to observe that universe implies a potential quantum energy transaction should enough observational quantum-states flux towards a singularity of existential belief. It is the thesis of this paper that this quantum energy transaction provides for inter-dimensional travel in various orders of magnitude, depending on the relative size of a visual network of symbols...
